# **The goal for the imminent massive cyber attack:**

## **The Digital ID**

*Private opinion with conclusions derived from own research*

By Aurelsson

I am sure you are quite aware that the world had been experiencing many cyber attacks in various countries around the world. There are various lists<sup>1</sup> that show<sup>2</sup> you the thousands of cyber attacks that have plagued many industries for the past years. There is also a top ten of major cyber attacks<sup>3</sup> for 2023 that have caused quite a lot of problems.

About a year ago, the World Economic Forum has also come out<sup>4</sup> that there will be a 'catastrophic' cyber attack 'likely within two years'. So that would be this year in 2024. Many key industries like healthcare, banking, transportation, aviation, electricity services, food industries and many others seem to be targeted. That is also what the WEF is warning against. And that is exactly what the controllers of this world will do: target and shut down those industries. The ultimate digital false flag of the 21<sup>st</sup> century.

In the mainstream media you will get the usual suspects that are behind the attacks like cyber groups in China, Russia, North Korea and Iran. The usual rogues states in the eyes of the West. Even ZeroHedge came out with another propaganda piece<sup>5</sup> on this subject.

It is very important to realize that whatever you are told in the mainstream media is bullshit. The real organizations which are behind the attacks are the intelligence agencies, which work together globally. The WEF, governments and think tanks is just the mouthpieces for the intelligence agencies.

The cyber attacks that we have gotten over the last decade were there to get the people accustomed to these attacks. To get people used to the attacks. To normalize it. To make it acceptable. And if it does not affect you much, who would care? Usually these attacks are swiftly resolved within a few days.

But what if the world would be hit with a massive cyber attack in the future? An attack that will affect billions of people around the world for a prolonged time? No more banking, no health services, no electricity, no internet, no food, no transport. It would be a disaster. People would cry out. People would demand a solution. People would cry to government to end the misery.

And that is exactly where the controllers want us. In a state of begging for a solution, after which they would present the solution.

Because after such a massive cyber attack, for which it would be unknown where it would come from initially, governments would quickly move to a 'zero trust' world. Nobody can be trusted, because we don't know who is behind the attacks. A **zero trust** world. Governments would point the finger at you and say we **cannot** trust **you**. You will have to prove to the authorities that you can be trusted.

But how to gain that trust? Simple: You have to identify yourself. For **everything**. **All the time**. For anything you want to do, like paying for something, taking a flight, getting healthcare, anything. With your face. Scanning it for everything. Even to access any website on the internet. Or to pay for anything. Everything will be a contract that you have to sign with your digital ID.

You see, this was never about your safety. This solution was never to stop the cyber attacks. It wasn't about catching the bad guys. No, it was always about getting **more control** over anything you do. So who are behind the attacks?

They are. The controllers. Always have been. They are preparing us at this moment, but there will be a point in the future when this massive thing hits and you will have to make a choice: Are you in the system, with its social credit score, CBDC's and Digital ID or are you out of the system and are living an alternative way of life? Are you a slave in the system or a living being living with dignity outside of the system?

The choice is yours and the clock is ticking...
